

A Short Scientific Manuscript

Anna Palatkina

July 8, 2026

1 Introduction

This document shows how a short scientific manuscript can be written in $\text{\LaTeX}$ and connected to figures, tables, and tables generated elsewhere in the project.

It's a cood document.

2 Methods

The analysis was performed using scripts stored in the project repository. Figures and tables were generated from the same data analysis workflow.

3 Results

The results section should refer to figures and tables using labels rather than manual numbering.

4 Discussion

The discussion explains the main result, its limitations, and what should be done next.
